Condensing Boiler (Atrisa Series)

Product Description

The Condensing Technology of boilers and water heaters features an advanced high efficiency and convenient that produces installation, operating, and lifetime cost advantages to systems operating from 450 to 2000 kw. For applications greater than 600 kW, you can easily chain multiple units together. Premix burners with a fiber mesh make the PACKMAN Condensing Boilers ideal for “green” operation. The Premix burner technology help to achieve emission levels less than 20 ppm Nox.

At a Glance

Key Features

- Available in five sizes from 450 to 2000 kw
- Efficiencies of up to 98%
- Advanced modulation technology
- Natural Gas or Dual Fuel
- Turndown ratio up to 5:1
- Whisper-quiet operation, even at full fire
- Small footprint
- chain multiple units for applications over 600 kw
- Direct/conventional vent with CPVC or Polypropylene (PP)

Atrisa Series

The Atrisa Series of boilers and water heaters continues the PACKMAN tradition of meeting the market demand for hot water solutions that reduce installation and life cycle costs while providing the best uptime reliability. Incorporating the latest in high efficiency, the Atrisa Series brings best-in class operation to a wide range of facilities including:

- Multi-family/Apartments
- Education
- Hotels
- Medical Centers/Nursing Homes
- Office Buildings

High performance in a compact, flexible design makes the Atrisa Series the perfect hot water solution for systems requiring 450 to 2000 kw and above.

In addition to lowering energy usage, the Atrisa Series maximizes each square foot for a greater return on new facility investment. A variety of quick-to-install, cost-efficient accessories eliminate the need for special rigging or system changes to existing mechanical rooms, making the Atrisa Series equally well suited for retrofits. The end result is an easily-installed, highly efficient solution that conserves space and lowers energy use to create significant short and long-term savings for all kinds of buildings.

The modular design in the Atrisa Series creates installation, operational, and reliability benefits unmatched by competitive boilers or water heaters in the same class. Designing a hydronic system with an Atrisa Series unit delivers advantages such as:

Lower Costs: Installation, operating, and lifetime costs are all reduced due to the modular design that maximizes efficiency and operation.

Higher Uptime Reliability: The modular design also creates a level of redundancy and reliability from a single Atrisa Series boiler or water heater that is typically only found in multi-unit systems.

Installation Flexibility: A wide variety of venting options allows the Atrisa Series to be easily integrated into any system, whether it is a retrofit or new construction.

Space Savings: Its compact footprint allows the Atrisa Series to be installed in small mechanical rooms.

Easy Access: Simple side access makes it more efficient for technicians to conduct scheduled service and maintenance on the units, which in turn saves time and reduces labor costs.

Maintaining the PACKMAN heritage, the Atrisa Series delivers high operating efficiency of up to 98%. By achieving the highest possible seasonal efficiencies, the Atrisa Series creates short-term and lifecycle energy savings. Best-in-class performance is achieved by using superior design approach that incorporates.

High-Quality Materials: At the heart of the boiler is a unique heat exchanger designed with oval-section stainless steel tubes. The heat exchanger is constructed out of 316L stainless steel tubes for high reliability and long life.

Advanced Modulation and Condensing Technologies: The Atrisa Series continues the decades-long trademark of PACKMAN solutions featuring fully modulating and condensing technologies. High modulation means the Atrisa Series matches loads exactly to need, minimizing cycling, eliminating over-firing, and achieving tight temperature control.

Premix Burner: The Atrisa Series features a total premix combustion unit, with variable-speed fan. The burner occupies very little space vertically, allowing the entire length of the heat exchanger to be exploited and bringing obvious benefits regarding condensation and stratification in the boiler.

High Level Design: PACKMAN condensing boilers are designed using high level technics such as computational fluid dynamics (CFD) for high thermal efficiency and finite elements (FE) analysis for ensuring long life.

PACKMAN GROUP

History

The Packman Company was founded in February 1975, and was soon afterwards registered in companies Registration Office. In early years the Packman construction and service branch focused on building installations. Different mega power plants were built by cooperating with Brown Boveri and Asseck companies in 1976.

The company started its official activities in construction of High-Pressure Vessels such as Hot-Water Boilers, Steam Boilers, Storage Tanks, Softeners and Heat Exchangers from 1984.

Packman Company is one of the first companies which supplied the high quality and standard hot water boilers to the customers.

Packman has exported its products to countries such as Uzbekistan, United Arab Emirates and other countries in the Middle East. It is one of the largest producers of hot-water and steam boilers in the Middle East.

Now we are proud to announce that the Packman industrial group has five major sub-brands that have product titles in all field of HVAC equipment and engineering services, and we do not know this success except with the help and support of our customers.

1. Construction Services Industry Association
2. Industry Association
3. Construction Companies' Syndicate
4. Technical Department Association
5. Mechanical Engineering Association
6. Engineering Standard Association
